Education

Charles University in Prague:

- Master's Degree in Earth Sciences & Geology
- Bachelor's Degree in Management with Natural Resources
- Postgraduate Certificate in Education (PGCE): General Education for High School & 2nd Level of Primary School

Certificates

Web App Programming in Python

- Certificate of OOP in Python
- Certificate of Python basics
- Certificate of SQLite databases
- Certificate of Modern Webdesign

Jiri Svoboda

Experienced educator and technical trainer with a background in science, business, data analysis and practical IT. Experienced in teaching teenagers and adults, designing IT curricula, developing learning materials, mentoring individual learners and delivering technical upskilling.

Strong at understanding complex subjects, structuring knowledge, explaining it clearly and adapting content to different audiences and practical needs. I learn independently and turn new knowledge into practical projects, teaching materials and technical documentation.

Alongside education, I develop practical technical skills through independent projects using Python, SQL, web applications, data processing, AI tools and physical computing. I am particularly interested in the **space between technology and people** — understanding how things work, solving practical problems and helping others use technology effectively.

Experience

2025 - present Online IT Academies

Engeto, CodersLab, ComputerHelp, ITnetwork & private clients | remotely

Educator & Mentor

Python & Software Development

- Designed and delivered advanced courses in Python, OOP, databases, data visualization with Streamlit and web/API development with Flask for university students and adult career-changers.
- Developed structured curricula and learning materials, conducted code reviews, and provided guidance on learning paths and career development.

2024 -2025 High school of IT and Automotives | Prague-Hostivar, Czechia

Python Programming Teacher

- Taught advanced Python programming, OOP and software development principles.
- Covered core programming concepts including data types, collections, control flow, functions, modules and packages, decorators, error handling, file handling, classes, encapsulation, inheritance, polymorphism, abstraction, and code refactoring.
- Introduced students to principles of code organization, separation of concerns, and virtual environments.

2020 - 2023 Masaryk Classical Gymnasium / Highschool | Ricany, Czechia

Computer Science & Programming Teacher

- Created and taught a comprehensive IT curriculum for students aged 13–19, using project-based learning and practical application of modern digital tools and technologies.
- Built students' skills progressively from digital literacy and content creation to data processing and visualization, SQL and databases, Python programming and automation, and robotics and physical computing.
- Covered areas including MS Office, video production, web and e-shop design with HTML/CSS and templates, AI tools, data visualization, programming, and physical computing.

2017 -2025 Paganía - Independent E-commerce Project | Prague, Czechia

Founder & Content Creator

- Developed and managed an independent e-commerce business, combining product creation, website and content management, digital marketing, customer communication, and sales.
- Designed and delivered educational workshops and public presentations on historical topics for general audiences.
- Created content for websites and social media and developed products for an international customer base.

2017 - 2020 LFM - servis s.r.o. | Prague, Czechia

Sales Representative: Solutions Specialist

- Managed the full sales cycle, focusing on understanding client needs and explaining complex products and services.
- Built and maintained long-term client relationships through clear communication and a consultative approach.
- Consistently worked toward national sales targets across a portfolio of heavy industrial machinery, including presses and crushers.

2007 - 2015 ALFA SYSTEM s.r.o. | Dobric, Czechia

Hydrogeological Analyst & Data Specialist

- Analyzed complex environmental datasets for risk-assessment projects and produced technical reports, maps, charts, and other data visualizations.
- Translated scientific and technical data into clear findings and practical recommendations for clients and non-technical audience.
- Supported decision-making by connecting complex data with operational needs and project objectives.
